DREAM. BELIEVE. ACHIEVE

SCHOOL OF ENGINEERING

B.Tech. Electronics and Communication Engineering

CURRICULUM AND SYLLABUS

(For 2022-23 Admitted Students)

FULLY FLEXIBLE CHOICE BASED CREDIT SYSTEM (FFCBCS)

MOHAN BABU UNIVERSITY

Vision

To be a globally respected institution with an innovative and entrepreneurial culture that offers transformative education to advance sustainability and societal good.

Mission

- Develop industry-focused professionals with a global perspective.
- Offer academic programs that provide transformative learning experience founded on the spirit of curiosity, innovation, and integrity.
- Create confluence of research, innovation, and ideation to bring about sustainable and socially relevant enterprises.
- Uphold high standards of professional ethics leading to harmonious relationship with environment and society.

SCHOOL OF ENGINEERING

Vision

To be the sought-after destination for engineering education recognised for excellence, innovation and the societal relevance and impact of its pursuits.

Mission

- Instil within our students fundamental engineering knowledge, a broad set of skills, and an inquisitive attitude to create innovative solutions to serve industry and community.
- Provide an experience par excellence with our state-of-the-art research, innovation, and incubation ecosystem to realise our learners' fullest potential.
- Impart continued education and research support to working professionals in engineering fields to enhance their domain expertise in the cutting-edge technologies.
- Inculcate among the engineers of tomorrow with a spirit to solve societal challenges.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Vision

To be a center of excellence in the fields of Electronics, Communications and Instrumentation through teaching and research producing high quality engineering professionals and Entrepreneurs with values and ethics to meet local and global demands.

Mission

- Imparting knowledge through contemporary curriculum and striving for development of students with diverse background.
- Developing skills for enhancing employability of students through comprehensive training process.
- Inspiring students and faculty members for innovative research through constant interaction with research organizations and industry to meet societal needs.
- Inculcating ethics and values in students for effective engineering practice.

B.Tech. Electronics and Communication Engineering

PROGRAM EDUCATIONAL OBJECTIVES

After few years of graduation, the graduates of B.Tech. ECE will:

- **PEO1.** Pursue higher education in the core or allied areas of Electronics and Communication Engineering or Management.
- **PEO2.** Develop into a productive and valued professional in industry /research by addressing the challenges in the core or allied areas of Electronics and Communication Engineering.
- **PEO3.** Choose entrepreneurial career in the core or other fields of interest.
- **PEO4.** Adapt to evolving technologies by upgrading knowledge and skills through lifelong learning.

PROGRAM OUTCOMES

On successful completion of the Program, the graduates of B.Tech. ECE Program will be able to:

- **PO1.** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2. Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3. Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4. Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6.** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **P07.** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
 - B.Tech. Electronics and Communication Engineering

- **PO8. Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9.** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10. Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11. Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **P012.** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES

On successful completion of the Program, the graduates of B.Tech. ECE program will be able to:

- **PSO1.** Design and develop customized electronic circuits for domestic and industrial applications.
- **PSO2.** Analyze, synthesize and design wired and wireless communication systems for desired specifications and applications.
- **PSO3.** Apply suitable methods and algorithms to process and extract information from signals and images in Radar, Satellite, Fiber optic and Mobile communication systems.

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on water technology, multi-functional materials, applications of electrochemistry, and instrumental methods of analysis, fuel chemistry and lubricants. This course also provides analytical skills for the quantitative estimation of materials through volumetric and instrumental methods of analysis and addresses the societal, health issues related to quality of water.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Solve problems associated with water, and address the societal, health and safety issues related to quality of water.
- **CO2.** Acquire basic knowledge on industrial polymers, composites, and Nano materials used in engineering applications.
- **CO3.** Apply and demonstrate competency in the basic concepts of electrochemical cells and sensors.
- **CO4.** Acquire basic knowledge of instrumental methods and their applications in the analysis of materials.
- **CO5.** Identify the quality of fuels and lubricants for their engineering applications.
- **CO6.** Develops independent working ability, through problem solving and effective communication.

B.Tech. Electronics and Communication Engineering

COURSE CONTENT

Module 1: WATER TECHNOLOGY

Introduction, types of water, Impurities in water and their consequences. Hardness of water, units of hardness, disadvantages of hardness, determination of hardness by EDTA method, numerical problems, boiler troubles, softening of water – Internal treatment, External treatment (Ion exchange process, zeolite process), desalination of brackish water by reverse osmosis, specifications of potable water as per WHO and BIS standards. Fluoride in ground water: Effects on human health, defluoridation method – Nalgonda method; merits and demerits of various defluoridation methods.

Module 2: CHEMISTRY OF MULTI FUNCTIONAL MATERIALS (09 Periods)

Engineering plastics: Definition, synthesis, properties and applications of PC, PTFE, and PMMA.

Conducting polymers: Definition, types and applications.

Biodegradable polymers: Definition, classification, mechanism of degradation and applications.

Nano Materials: Introduction, size dependent properties (Colour, magnetic and electrical), method of synthesis – CVD, applications of Nano materials.

Module 3: ELECTROCHEMICAL CELLS, STORAGE DEVICES AND (09 Periods) SENSORS

Electrode potential, Electrochemical cell, EMF of an electrochemical cell.

Batteries: Introduction, types of Batteries-Primary battery-dry cell, secondary battery-Lead-acid batteries, Lithium-ion batteries, Lithium- Polymer batteries, Applications of batteries.

Fuel Cells: Definition, H_2-O_2 fuel cell, solid oxide fuel cell, applications of fuel cells. *Sensors:* Introduction, Types of Sensors, electrochemical sensors, applications.

Module 4: INSTRUMENTAL METHODS AND APPLICATIONS

Introduction to spectroscopy-types of energy present in molecules, types of spectra, UV-Vis spectroscopy – principle, types of electronic transitions, Instrumentation and applications; Infrared spectroscopy – principle, types of vibrational modes, Instrumentation and applications; working principle and applications of SEM, TEM, and XRD.

Module 5: FUELS AND LUBRICANTS

Fuels: Classification of fuels, calorific value, numerical problems; Liquid fuels, cracking of oils (Thermal and Fixed-bed catalytic cracking), Synthetic petrol: Fischer-Tropsch method and Bergius process. Eco friendly fuels-Types, significances.

Lubricants: Definition, functions of lubricants, mechanism of lubrication, classification of lubricants, properties of lubricants – viscosity and viscosity index, flash and fire point, cloud and pour point, Aniline point, neutralization number and mechanical strength.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXPERIMENTS: (Minimum 10 exercises shall be conducted)

- 1. Determination of hardness of ground water sample.
- 2. Determination of alkalinity of Water sample.
- 3. Estimation of residual chlorine in drinking water.
- 4. Estimation of Dissolved Oxygen in water by Winkler's method.

(09 Periods)

(08 Periods)

(10 Periods)

- 5. Estimation of Fe (II) by Dichrometry.
- 6. Conductometric titration of strong acid Vs strong base.
- 7. Estimation of Ferrous ion amount by Potentiometry.
- 8. Synthesis of nano ZnO using sol-gel process.
- 9. Determination of Viscosity by Ostwald's viscometer.
- 10. Determination of strength of acid by using P^{H} metric method.
- 11. Determination of Strength of an acid in Pb-Acid battery.
- 12. Determination of percentage of Iron in Cement sample by colorimetry.

Course Code

Course Title

22EE102402

FUNDAMENTALS OF ELECTRICAL ENGINEERING

Pre-Reauisite

Anti-Requisite Basic Electrical and Electronics Engineering

Co-Requisite

COURSE DESCRIPTION: This course is designed to provide an overview on the fundamentals of electrical technology for non-electrical graduates. The course provides a deep insight about the various concepts such as network reduction techniques, analysis of DC and AC circuits; Constructional details, operation and applications of various Electrical Machines used in industry and for domestic applications.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- Analyze the DC electrical circuits by applying the principles of network reduction CO1. techniques, mesh and nodal analysis.
- Analyze the single phase AC electrical circuits to investigate the response and CO2. determine various electrical quantities.
- Analyze the operational aspects of Single Phase Induction Motors and realize their CO3. applications.
- Understand the operational aspects of Special Machines used in industry and for CO4. domestic applications.
- Analyse the equivalent circuit of a single phase transformer, to determine the CO5. performance and assess its sustainability for various load conditions.
- Work independently or in teams to solve problems with effective communication. CO6.

B.Tech. Electronics and Communication Engineering

COURSE CONTENT

Module 1: DC CIRCUITS

Classification of network elements; Voltage-Current relations for passive elements; Network reduction techniques-series, parallel, series-parallel circuits, current and voltage division rules; wye-to-delta and delta-to-wye transformations; nodal analysis and mesh analysis with dependent and independent DC sources.

Module 2: SINGLE PHASE AC CIRCUITS

Analysis of single phase AC circuits: impedance and admittance, impedance triangle; Power triangle; Response of R, L and C elements with different combinations; Resonance, bandwidth and quality factor for series and parallel networks.

Module 3: SINGLE PHASE INDUCTION MOTOR

Construction of single phase induction motor, capacitor start & run split phase induction motors operation and applications.

Module 4: SPECIAL MACHINES

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

1

2.

3.

4.

Constructional details, operation and applications of PMBLDC motor and stepper motor (VR and PM type only).

Module 5: SINGLE PHASE TRANSFORMERS

Verification of Kirchhoff's laws.

Construction and working principle, EMF equation, losses, equivalent circuit, OC and SC tests on single phase transformer, predetermination of efficiency and regulation.

Total Periods: 30

5. Design a resonant circuits to select or reject the specified range of frequencies.

Development of Locus diagram for RL and RC circuits.

6. Brake test on single phase induction motor.

Verification of Mesh and Nodal Analysis.

7. No-load and blocked rotor test on single phase induction motor.

Measurement of power and power factor in a single phase AC circuits.

- 8. OC and SC tests on a single phase transformer.
- 9. Separation of no-load losses of a single phase transformer.
- 10. Load test on single phase transformer.

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on C Programming concepts, Operators and Expressions, Input and Output Functions, Control Structures, Problem Solving Aspects, Arrays and Strings, Functions, Pointers, Structures and Unions and File Handling.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Demonstrate knowledge on C programming constructs to develop programs.
- **CO2.** Design algorithms using problem-solving techniques for given problems.
- **CO3.** Apply functions and Arrays to enhance reusability and data manipulation.
- **CO4.** Use pointers to manage the memory effectively.
- **CO5.** Apply Structures, Unions and File handling concepts to develop societal applications.

COURSE CONTENT

Module 1: INTRODUCTION TO C PROGRAMMING

Basics of C Programming: Introduction, Structure of a C program, Concept of a variable, Data types in C, Program statement, Declaration, Storing the data in memory, Tokens, Operators and expressions, Lvalues and Rvalues, Type conversion in C.

Input and Output: Basic screen and keyboard I/O in C, Non-formatted input and output, formatted input and output functions.

Module 2: CONTROL STATEMENTS AND INTRODUCTION TO (08 Periods) PROBLEM SOLVING

Control Statements: Specifying test condition for selection and iteration, Writing test expression, Conditional execution and selection, Iteration and repetitive execution, goto statement, Special control statements, Nested loops.

Introduction to Problem Solving: Algorithms, Flowcharts, Problem solving aspect, Topdown design, Implementation of algorithms, program verification and efficiency of algorithms.

Module 3: ARRAYS & STRINGS AND FUNCTIONS

Arrays and Strings: One-dimensional array – Declaration, Initialization, Accessing elements, operations; Multi-dimensional arrays – Declaration, Initialization, Working with 2D arrays; Strings – Declaration, Initialization, Printing strings, String input, Character manipulation, String manipulation; Arrays of strings – Initialization, manipulating string arrays.

Functions: Concept of function, Using functions, Call by value mechanism, working with functions, passing arrays to functions, Scope and extent, Storage classes, Recursion.

Module 4: POINTERS

Introduction to Pointers: Understanding memory addresses, Address operator (&), Pointer – declaration, Initialization, Indirection operator and dereferencing, Void and Null pointers, Use of pointers, Arrays and pointers, Pointers and strings, Pointer arithmetic, Pointers to pointers, Array of pointers, Pointers to an array, Two-dimensional arrays and pointers, Pointers to functions, Dynamic memory allocation.

Module 5: USER-DEFINED DATA TYPES AND FILES

User-Defined Data Types: Structures - Declaration, Accessing the members, Initialization, typedef and its use, Arrays of structures, Arrays within structure, Structures and pointers, Structures and functions; Unions, Enumeration types, Bitfields.

Files: Using files in C, Working with text and binary files, Direct File Input and Output, Files of records, Random access to files of records.

Total Periods: 45

EXPERIENTIAL LEARNING

1. a) Write a C program to perform the arithmetic operations on two integer numbers.

b) Write a program to evaluate the following expressions by reading the necessary values from the keyboard.

i. (ax + b)/(ax - b)ii. 2.5 log x + Cos 32⁰ + | x² + y²| iii. $ax^5 + bx^3 + c$ iv. ae^{kt}

(10 Periods)

(10 Periods)

(08 Periods)

(09 Periods)

- 2. a) Write a C program to find the roots of a quadratic equation.
 - b) In a town, the percentage of men is 52. The percentage of total literacy is 48 and the total percentage of literate men is 35 of the total population. Write a C program to find the total number of illiterate men and women if the population of the town is 7000.
 - c) The total distance travelled by a vehicle in *t* seconds is given by the distance $ut+at^2/2$ where *u* and *a* are the initial velocity (m/sec.) and acceleration (m/sec²). Write C program to find the distance travelled at regular intervals of time given the values of *u* and *a*. The program should provide the flexibility to the user to select his own time intervals and repeat the calculations for different values of *u* and *a*.
- 3. a) Write a C Program to compute an electricity bill based on the following slab rates.

Consumption units	Rate (in Rupees/unit)
0-100	4.0
101-150	4.6
151-200	5.2
201-300	6.3
Above 300	8.0

(Hint: Take current and old meter readings from the user to get consumption units)

- b) An insurance company computes the premium amount based on the following;
 - i. If a person's health is excellent and the person is between 25 and 35 years of age and lives in a city, and is a male then the premium is Rs.4 per thousand and the policy amount cannot exceed Rs.2 lakhs.
 - ii. If a person satisfies all the above conditions and is female then the premium is Rs.3 per thousand and the policy amount cannot exceed Rs.1 lakh.
 - iii. If a person's health is poor and the person is between 25 and 35 years of age and lives in a village and is a male then premium is Rs.6 per thousand and the policy cannot exceed Rs. 10000.
 - iv. In all other cases the person is not insured.

Write a C program to determine whether the person should be insured or not, his/her premium rate and maximum amount for which he/she can be insured.

c) Write a C Program to find the grade for a student using a Switch case. The user needs to enter a subject score (varies from 0 to 100)and then display the grade as described below.

Score	Grade	Score	Grade
> = 90	0	>=50 to < 60	D
>=80 to < 90	А	>=40 to < 50	Е
>=70 to < 80	В	< 40	Fail
>=60 to < 70	С		

4. a) A Fibonacci sequence is defined as follows:

The first and second terms in the sequence are 0 and 1. Sub-sequent terms are found by adding the preceding two terms in the sequence. Write a C program to generate the first n terms of the sequence.

- b) Write a C program to find the sum of individual digits of a positive integer.
- c) Write a C program to read two numbers x and n, and then compute the sum of the geometric progression: $1+x+x^2+x^3+\dots+x^n$. Show appropriate error message for n<0. (*Example*: if n is 3 and x is 5, then the sum is: 1+5+25+125)
- d) Write a C program to print the following pattern.

			1				
		1	2	1			
	1	2	3	2	1		
1	2	3	4	3	2	1	
2	3	4	5	4	3	2	1

- 5. a) Write a C program to generate all the prime numbers between 1 and *n*, where *n* is a value entered by the user. Define a separate function to generate prime numbers.
 - b) Write C program that uses recursive function to find the following. i) Factorial of a given integer ii) GCD of two given integers
- 6. a) Write a C program to find both the largest and smallest numbers in a list of integers.
 - b) Write a C program that uses function to perform the following:i) Addition of Two Matricesii) Multiplication of Two Matrices
- 7. a) Write a C program to insert a sub-string in to a main string at a given position.
 - b) Write a C program to count the lines, words and characters in a given text.
- 8. a) Write a C program to print the elements of an array in reverse order using pointers.
 - b) Write a C program to count the number of vowels and consonants in a string using pointers.
 - c) Write a C program to store *n* elements in an array and print the elements in sorted order using pointers.
- 9. a) Write a C program that performs the following operations:

1

i. Reading a complex number ii. Writing a complex number

iii. Addition of two complex numbers iv. Multiplication of two complex numbers (**Note:** Represent complex number using a structure.)

- b) Define a structure to store employee details include *Employee-Number, Employee-Name, Basic-pay, Date-of-Joining.* Write a C program for the following.
 - i. A function to store 10 employee details.
 - ii. A function to implement the following rules while revising the basic pay.
 - If Basic-pay<=Rs.5000 then increase it by 15%.
 - If Basic-pay> Rs.5000 and <=Rs.25000 then it increase by10%.
 - If Basic-pay>Rs.25000 then there is no change in Basic-pay.
 - iii. A function to print the details of employees whohave completed 20 years of service from the Date-of-Joining.
- 10 a) Write a C program to reverse the first *n* characters of a given text file.
 - b) Write a C program to merge two files into a new file.

COURSE DESCRIPTION: This course provides theoretical and practical knowledge on sorting and searching, Linked list, stacks and queues. It also emphasizes on concepts and techniques of trees, search trees and heaps, multi way trees, graphs and hashing.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Understand the fundamental concepts of data structures, asymptotic notations and Algorithm analysis techniques to measure the performance of an algorithm.
- **CO2.** Analyze performance of sorting and searching algorithms by making use of time and space complexity.
- **CO3.** Design algorithms to solve societal problems by applying contextual knowledge on linked lists
- **CO4.** Identify suitable data structure to Solve computational problems
- **CO5.** Construct hash tables by using Hash functions and relevant collision resolution technique
- **CO6.** Work independently or in team to solve problems with effective communication

COURSE CONTENT

Module 1: INTRODUCTION, SORTING AND SEARCHING

Introduction: Introduction to data structures, Introduction to Algorithm, Performance Analysis- Space Complexity, Time Complexity, Asymptotic Notation- Big Oh, Omega, Theta notations, Guidelines for Asymptotic Analysis, Algorithms Analysis: Problems & Solutions. Sorting: Bubble Sort, Insertion sort, Selection Sort, Shell Sort, Radix sort and their performance analysis.

Searching: Linear Search, Binary Search and their performance analysis.

Module 2: LINKED LIST

Single Linked List, Circular Linked List, Double Linked List, Circular Double Linked List, Applications of Linked List- Sparse Matrix Representation and its performance analysis, Addition of Polynomials and its performance analysis.

Module 3: STACKS AND QUEUES

Stacks: Introduction, Definition, Implementation of stacks using arrays, Implementation of stacks using linked list, Applications of Stacks.

Introduction, Definition, Implementation of queues using arrays, Oueues: Implementation of queues using linked list, Circular Queue, Dequeue, Priority Queue, Applications of Queues.

Module 4: TREES, SEARCH TREES AND HEAPS

Trees: Basic Terminologies, binary trees, Properties of binary tree, Representation of Binary Tree, Binary tree traversals.

Search Trees: Binary Search Trees, Operations on Binary Search Trees, AVL Trees and Operations on AVL trees

Heap: Heap Trees, Implementation of Heap Trees, Applications of Heap - Heap Sort and Its performance Analysis.

Module 5: MULTI WAY TREES, GRAPHS AND HASHING

Multiway Trees: M-way search trees, B-trees, Operations on B-trees, B+-trees. Graphs: Introduction, Basic Terminologies, Representation of Graphs, Breadth First Search and its Complexity Analysis, Depth First Search and its Complexity Analysis. Hashing: Introduction, Hash Table Structure, Hash Functions, Linear Open Addressing, Chaining and their performance analysis.

Total Periods: 45

LIST OF EXERCISES:

EXPERIENTIAL LEARNING

- Implement following sorting algorithms 1.
 - a) Bubble Sort
 - **b)** Insertion sort
 - c) Selection sort
- Store roll numbers of students who attended placement training program in 2. random order in an array.

a) Write a program to search whether a particular student attended training or using linear search not

b) Write a program to search whether a particular student attended training or not using binary search

(08 Periods)

(11 Periods)

26

(08Periods)

(09 Periods)

(09 Periods)

- 3. **a)** Department of CSE has a readers club named 'Prerana'. Students of all years can be granted membership on request and they can get books. Similarly one may cancel the membership of club. First node is reserved for head of readers club and last node is reserved for in-charge of readers club. The student's information in each node consisting of name of the student and roll no of the student. Develop a program to perform following operations on readers club member's information using singly linked list.
 - i) Add and delete the members as well as head or even in-charge.
 - ii) Compute total number of members in readers club
 - iii) Display members in readers club
 - iv) Display list in reverse order using recursion
 - v) Sort the list using name and display it.
 - b) A Company has N employees and it maintains each employee data with the following attributes like: emp_id, emp-dept,emp_sal, emp_mobileno. Use a menu driven Program to perform following operations on employee's data using Doubly Linked List (DLL).
 - i) Create a DLL of N Employees Data by using end insertion.
 - ii) Display the status of DLL and count the number of nodes in it
 - iii) Perform Insertion and Deletion at End of DLL
 - iv) Perform Insertion and Deletion at Front of DLL
 - v) Perform Insertion and Deletion at any user specified position of DLL
 - vi) Exit
- 4. **a)** Implement a menu driven Program for the following operations on stack using arrays.
 - i) Push an Element on to Stack
 - ii) Pop an Element from Stack
 - iii) Demonstrate how Stack can be used to check Palindrome
 - iv) Display the elements of a Stack
 - v) Exit
 - **b)** Develop a menu driven program to implement queue operations using arrays
- 5. **a)** Write a program to implement stack using linked list
 - **b)** Write a program to implement queue using linked list
- a) Develop a program to convert an infix expression to postfix expression using stack
 b) Write a program to evaluate given postfix expression using stack
- 7. Develop a menu driven program to perform the following operations on a binary search tree
 - a) Create a binary search tree
 - **b)** Insert an element into a binary search tree
 - c) Delete an element from binary search tree
 - d) Traverse the binary search tree in In order, Preorder and post order
- 8. Write a program to perform the following operations on AVL tree
 - a) Insert an element into AVL tree
 - b) Delete an element from AVL tree
 - c) Display the elements of AVL tree in ascending order
- 9. **a)** Develop a program to implement Breadth first search traversal.
 - **b)** Develop a program to implement Depth first search traversal.
- 10. Write a program to implement hashing with
- B.Tech. Electronics and Communication Engineering

- a) Separate Chaining Method
- **b)** Open Addressing Method

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on engineering drawing conventions, Importance of engineering drawing, fundamental concepts of sketching, computer aided drafting and different types of projections of geometric entities (both 2D and 3D) through computer aided drafting packages.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Apply the principles of engineering drawing, Methods and CAD tools to draw the Geometries and Curves to communicate in engineering field.
- **CO2.** Understand and draw projections of points (0D) located in four quadrants
- **CO3.** Visualize, plan and draw projections of lines (1D) and planes (2D) (inclined to both planes of projection)
- **CO4.** Visualize and draw projections of regular solids (3D) (inclined to both planes of projection) and sections of regular solids (front view, top view and true shape)
- **CO5.** Develop lateral surfaces of solids and draw Isometric views of given objects for engineering communication using principles of engineering drawing and CAD tools.
- **CO6.** Work independently or in teams to solve problems with effective communication

COURSE CONTENT

INTRODUCTION TO ENGINEERING GRAPHICS AND (06 Periods) Module 1: DESIGN

Principles, significance -Conventions in drawing-lettering - BIS conventions-Dimensioning principles and conventional representations.

Exercises:

1. Practice exercise on Basic Lettering and Dimensioning

2. Practice exercise on Conventional representations

Introduction to AutoCAD: Basic drawing and editing commands: line, circle, rectangle, erase, view, undo, redo, snap, object editing, moving, copying, rotating, scaling, mirroring, layers, templates, polylines, trimming, extending, stretching, fillets, arrays, dimensions. **Exercises:**

3. Practice exercise using basic drawing commands

4. Practice exercise using editing commands

Module 2: CONICS, PROJECTION OF POINTS

Conics & Special Curves: Conic sections - eccentricity method only Exercises:

5. Practice exercises on Ellipse, Parabola, Hyperbola

6. Practice exercises on Projection of points

Module 3: PROJECTION OF LINES AND PLANES

Projection of points in any quadrant, lines inclined to one or both planes, finding true lengths, angle made by line, Projections of regular plane surfaces. Exercises:

7. Practice exercises on projection of lines inclined to one plane

8. Practice exercises on projection of lines inclined to both planes

9. Practice exercises on Projections of regular plane surfaces

Module 4: **PROJECTION OF SOLIDS AND SECTION OF SOLIDS** (6 Periods)

Projection of solids: Projection of regular solids inclined to one plane.

Sections of solids: Section planes and sectional view of right regular solids- prism, cylinder, pyramid and cone, True shapes of the sections.

Exercises:

10. Practice exercises on Projections of regular solids

11. Practice exercises on Sections of solids

Module 5: DEVELOPMENT OF SURFACES, ORTHOGRAPHIC AND (10 Periods) **ISOMETRIC PROJECTIONS**

Development of surfaces: Development of surfaces of right regular solids-prism, cylinder, pyramid, cone and their sectional parts.

Exercises:

12. Practice exercises on Development of surfaces of right regular solids

ORTHOGRAPHIC AND ISOMETRIC PROJECTIONS

Orthographic Projections: Systems of projections, conventions and application to orthographic projections.

Isometric Projections: Principles of isometric projection- Isometric scale; Isometric views: lines, planes, simple solids.

Exercises:

14. Practice exercises on Orthographic Projections

15. Practice exercises on Isometric Projections

16. Practice exercise on Isometric Projection of the 2-storage building.

Total Periods: 36

22AI105001	DESIGN THINKING	-	1	2	-	2
Pre-Requisite	-					

Anti-Requisite

Co-Requisite

COURSE DESCRIPTION: This course provides a detailed discussion and hands-on experience on design thinking process, evaluation of requirement specification and reflections on design experience. This course also focuses on demonstration of five phases of design thinking such as empathize, define, ideate, prototyping, testing and validation with design thinking tools and frameworks.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Investigate the requirements of a problem by conducting surveys.
- **CO2.** Create meaningful and actionable problem statements for creative problem solving.
- **CO3.** Construct blueprints to visualize user attitudes and behavior for gaining insights of customers.
- **CO4.** Design prototypes of innovative products or services for a customer base.
- **C05.** Develop relevant products or services by choosing good design and applying empathy tools for experiencing user requirements.
- **CO6.** Work independently and communicate effectively in oral and written forms.

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Introduction to Design Thinking – Design thinking Process, Definition, Importance, Phases of Design Thinking, Canva Tool.

- 1. Conduct survey and identify the problem by either individual or group and frame a problem statement using AEIOU (Activities, Environment, Interactions, Objects, Users) framework.
- 2. Identify demographic or focus group for problem statement and create persona and explicitly define the characteristics of persona using Canva tool.

Emphathize - Role of empathy in design thinking, Purpose of Empathy Map, Empathy Tools – Customer Journey Map, Personas, Coggle Tool.

- 3. Build a Customer Journey Map (CJM-Before-During-After) and identify touch points for any mock scenario or persona created during last experiment and frame 2-3 questions using HMW (How Might We).
- Create an Empathy Map using Coggle design thinking tool.
 Sample Empathy Map:

EMPATHY MAP Example (Buying a TV)

Ideation - Importance of visualizing and empathizing before ideating, Applying the method, Ideation Tools - Story board, Brainstorming, Mind Map, SCAMPER.

5. **Story boarding design ideas:** Consider a mock scenario and create user stories and storyboards to transform information about user needs into design concepts using any story board tool.

6. Create Mind Map for your problem statement using Coggle. **Sample Mind Map:**

7. Perform Brain Storming Session with your team and record using the SCAMPER framework and finalize the best three innovative ideas.

Prototyping and Testing – Definition, Prototype examples, Need for Prototyping, Fidelity for prototypes, Process of prototyping, Introduction to Marvel POP Software, Testing prototypes with users.

- 8. Create an application prototype for product recommendation using **Marvel POP Software**.
- 9. Create a **low-fidelity paper prototype** by sketching out the product design and adding relevant functionality.

10. Test the prototype created in Exercise 9 by interacting with each member of the team, walking them through the design and gathering feedback. Use feedback grid with the following quadrants: what worked, what could be improved, questions, and ideas.

What worked?	What could be improved?
Questions	Ideas

COURSE DESCRIPTION: This course deals with listening strategies, reading comprehension, grammar, vocabulary, pronunciation, Written, Verbal and Non-verbal communication, Channels of communication, Barriers to communication, Modes of technology-based communication, and Technical Communication

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Understand the basics of Reading, Writing, Listening, and Speaking skills.
- **CO2.** Analyze the rules of English grammar in speaking and writing.
- **CO3.** Demonstrate knowledge of English pronunciation in speaking.
- **CO4.** Apply the knowledge of reading strategies and vocabulary in communication.
- **CO5.** Apply the strategies of writing in preparing a report.

COURSE CONTENT

Module 1: SUPER HEROES – THE SCIENCE BEHIND SUPER HEROES (06 Periods)

Reading for Comprehension, Grammar, Speaking, Listening, Vocabulary, Writing, Verbal and Non-verbal communication.

Module 2: ALIENS – THE CYLINDER OPENS

Reading for comprehension, Grammar, Vocabulary, Writing, Listening, and Channels of communication.

Module 3: INVENTORS – THE RAMAN EFFECT (06 Periods)

Reading comprehension, Listening, Writing, Grammar, Speaking, Pronunciation, and communication barriers.

Module 4: HEALTH AND NUTRITION - WHAT SHOULD YOU BE (06 Periods) EATING

Reading comprehension, Listening, Speaking, Grammar, Writing, Pronunciation, and Modes of technology-based communication.

Module 5: NEW-AGE ENTREPRENEURS – HOW A CHINESE (06 Periods) BILLIONAIRE BUILT HER FORTUNE

Reading comprehension, Vocabulary, Listening, Grammar, Writing, and Technical Communication

Total Periods: 30

EXPERIENTIAL LEARNING

PART-A

Any six modules among the following:

- 1. Conversation starters and role play
- 2. Reading comprehension
- 3. Listening comprehension
- 4. Vocabulary Building (business and job-related vocabulary)
- 5. Describing people, places, objects, and Events
- 6. Phonetics Accent/ Rhythm/ Intonation
- 7. Tenses
- 8. Proposal Writing

(06 Periods)

PART-B

Any four modules among the following:

- 1. Communicating effectively is important to become successful in any business. Prepare a Case study of successful business personnel regarding communication competence.
- 2. Prepare a PowerPoint presentation on an orator and analyze the voice dynamics.
- 3. People face situations to convince or agree with the points they have. The college arranges a 5-day tour program to Goa. Prepare a video on persuasive talk and convince parents to get permission.
- 4. Write an article on the famous clichés of our time.
- 5. Prepare a poster on the effects of social media on youth.
- 6. Give a short talk on the importance of inventors and their role in present socio, political and economic changes.
- 7. Prepare a collage of entrepreneurs' pictures and their achievements.
- 8. NASA released recent photos of the universe with the help of the James Webs Space Telescope. Write down the expected impact on the existing theory on planets and the universe.
- 9. Obesity is the most common problem for people. List out the reasons for the problem and prepare food habits to overcome.
- 10. Epics of India deals with superheroes of those days. Compare the weapons used in the battles of Mahabharata with modern weapons.
- 11. Write a report on your recently invented product so that it should be sold as a hot cake in the market.
- 12. Illustrate the essential rules for good precis writing.

_

COURSE DESCRIPTION: This course deals with an understanding of the fundamental soft skills and their practical social and workplace usage. It helps participants to communicate effectively and to carry themselves confidently and in harmony with their surroundings. They also learn how to identify and overcome the barriers in interpersonal relationships, and to employ oral and written communication, teamwork, leadership, problem-solving, and decision-making skills, to gain the best results.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Demonstrate knowledge of career skills by analyzing the strategies of Goal Setting, Thinking Skills, interpersonal skills, and etiquette.
- **co2.** Analyze various situations by applying Assertive communication and Non-verbal forms in developing Interpersonal Skills.
- **CO3.** Apply appropriate managerial strategies by analyzing the conflicts in various situations.
- **CO4.** Demonstrate various communication styles by analyzing and applying Thinking Skills in diverse teams as an individual and a team member and during Interviews and Group Discussions.
- **CO5.** Analyze and apply appropriate strategies of emotional intelligence and adaptability skills for personal and professional success.

COURSE CONTENT

*Any ten modules are mandatory among the following:

Module 1: BODY LANGUAGE

Body language basics, Types of Body Language, Facial Expressions and their messages, Eye Contact Insights, Body Posture, Hand gestures, and finger movements

Module 2: ASSERTIVENESS

Communication Styles, Benefits, Asserting yourself, Tips, and Role Play

Module 3: GOAL SETTING

Seven Steps of Goal Setting, Self-Motivation, Personal Goal Setting, and Setting Career Goals

Module 4: THINKING SKILLS

Positive Thinking, Creative Thinking, Lateral Thinking, Logical Thinking, and Intuitive Thinking

Module 5: TEAM BUILDING

Learning Activities, Management Essentials, and Team Building Scenarios

Module 6: CONFLICT MANAGEMENT

Ways of Resolving Conflict, Personality Types and Conflict, Conflict Resolution Process, and Team Conflict

Module 7: EMOTIONAL INTELLIGENCE

Definition, understanding emotions, Identifying emotional intelligence, and self-assessment

Module 8: ADAPTABILITY SKILLS

Understanding organizational communication, Identifying adaptability skills, and self-assessment.

Module 9: GROUP DISCUSSIONS

Types of GD, Dos, and Don'ts, Dynamics of GD, Intervention, and Summarization Techniques

Module 10: INTERVIEW SKILLS

Planning, Opening Strategies, Answering Strategies, Teleconferencing, Videoconferencing, Practice questions, and Dress code

Module 11: INTERPERSONAL SKILLS

Starting a Conversation, Responding to a Conversation, Conversation Examples, Body Language, and Role Play

Module 12: ETIQUETTE

Basic Social Etiquette, Telephone Etiquette, Dining Etiquette, Conference Etiquette, and Email Etiquette

Course Code	Course Title	L	т	Ρ	S	С
22MM101402	MULTIVARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course contains various topics related to the calculus of the functions of two or more variables and differential equations. In particular, this contains topics like differentiation and integration of the functions of several variables together with their applications. It includes calculus of vector functions with applications. The methods of solving ordinary and partial differential equations are also incorporated for a better exposure.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Determine the extreme values of functions of two variables.
- **CO2.** Evaluate multiple integrals in Cartesian, Polar and Spherical coordinates.
- **CO3.** Demonstrate gradient, directional derivative, divergence, curl and Green's, Gauss, Stoke's theorems.
- **CO4.** Solve higher order linear differential equations related to various engineering fields.
- **CO5.** Identify solution methods for partial differential equations that model physical processes.

CO-PO Mapping Table:

Correlation Levels:

3: High; 2: Medium;

COURSE CONTENT

Module 1: MULTIVARIABLE CALCULUS (DIFFERENTIATION) (07 Periods)

Introduction to function of several variables, Jacobian and its properties, Functional dependence, Maxima and minima of functions of two variables, Lagrange's multiplier method.

Module 2: MULTIVARIABLE CALCULUS (INTEGRATION) (10 Periods)

Evaluation of Double integrals (Cartesian and Polar coordinates), Change of order of integration (Cartesian form only), Evaluation of triple integrals, Change of variables: Double integration from Cartesian to Polar coordinates, Triple integration from Cartesian to Spherical polar coordinates.

Module 3: MULTIVARIABLE CALCULUS (VECTOR CALCULUS) (11 Periods)

Vector Differentiation: Scalar and Vector fields: Gradient of a scalar field, Directional derivative, Divergence of a vector field, Solenoidal vector, Curl of a vector field, Irrotational vector, Laplacian operator.

Vector Integration: Line, Surface and Volume integrals, Vector integral theorems: Statement of Green's, Stoke's and Gauss divergence theorems, Verification and evaluation of vector integrals using them.

Module 4: ORDINARY DIFFERENTIAL EQUATIONS

Second and higher order linear differential equations with constant coefficients: Non-Homogeneous equations with R.H.S terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x, $e^{ax}V(x)$ and $x^nV(x)$, Method of variation of parameters, Equations reducible to linear differential equations with constant coefficients: Cauchy-Euler and Cauchy-Legendre differential equations.

Module 5: PARTIAL DIFFERENTIAL EQUATIONS

Formation of partial differential equations by the elimination of arbitrary constants and arbitrary functions, Lagrange's linear equation, Method of separation of variables.

Total Periods: 45

EXPERIENTIAL LEARNING

- 1. American Airlines requires that the total outside dimensions (length + width + height) of a checked bag not exceed 62 inches. Suppose you want to check a bag whose height is equal to its width. What is the largest volume bag of this shape that you can check on an American Airlines flight?
- 2. An insulated rod of length l has its ends A and B maintained at $0^{\circ}C$ and $100^{\circ}C$ respectively until steady state conditions prevail. If B is suddenly reduced to $0^{\circ}C$ and maintained at $0^{\circ}C$, establish an equation to find the temperature at a distance x from A at time t under the above conditions.
- 3. Apply the Gamma function; obtain the mass of an octant of the ellipsoid $\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1$ with the density at any point being $\rho = k x y z$.

(07 Periods)

(10 Periods)

4. A person weighs 150lb walking exactly one revolution up a circular, spiral staircase of radius x ft. if the person rises 10ft then find the work done by the person. Consider different radii and find the work done by the person in each case.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22MM101404	TRANSFORM TECHNIQUES AND LINEAR ALGEBRA	3	-	-	-	3
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: This course focus on basic areas of theory and more advanced Engineering Mathematics topics which provide students with the relevant mathematical tools required in the analysis of problems in Engineering and scientific professions. This course includes Fourier series, Fourier Transforms, Laplace transforms, Inverse Laplace transform, solutions for linear systems, Eigen values and Eigen vectors, Linear transformation.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Demonstrate Fourier series to study the behaviour of periodic functions and their applications and Fourier transform to connect the frequency and time domain systems.
- **CO2.** Apply the techniques of Laplace transform to solve ordinary differential equations.
- **CO3.** Make use of echelon forms in finding the solution of system of linear equations. Compute Eigen values and Eigen vectors of square matrices.
- **CO4.** Use the fundamental concept of a basis for a subspace to give a precise definition of dimensions and rank, and to solve problems in appropriate situations.

B.Tech. Electronics and Communication Engineering

COURSE CONTENT

Module 1: FOURIER SERIES & FOURIER TRANSFORMS

Introduction to Fourier series, Convergence of Fourier series (Dirichlet's conditions), Fourier series in $(-\pi,\pi)$, Half-range Fourier sine and cosine expansions in $(0,\pi)$, Fourier integral theorem (statement only), Fourier sine and cosine integrals; Fourier transforms, Fourier sine and cosine transforms, Inverse Fourier transforms.

Module 2: LAPLACE TRANSFORMS

Definition of Laplace transforms, Existence conditions, Laplace transforms of standard functions, Properties of Laplace transforms (without proofs), Laplace transforms of derivatives, Laplace transforms of integrals, Multiplication by t^n , Division by t, Laplace transforms of periodic functions, Laplace transforms of unit step function and unit impulse function.

Module 3: INVERSE LAPLACE TRANSFORMS

Inverse Laplace transforms by different methods, Convolution theorem (without proof), Inverse Laplace transforms by convolution theorem, Applications of Laplace transforms to ordinary differential equations of first and second order with constant coefficients.

Module 4: LINEAR ALGEBRA -MATRICES

Rank of a matrix: Echelon form, Linear systems of equations: solving system of Homogeneous and Non-Homogeneous equations; Eigen values and Eigen vectors of a matrix and properties (without proofs), Diagonalization of a matrix by orthogonal transformation, Cayley-Hamilton Theorem.

Module 5: LINEAR ALGEBRA- VECTOR SPACES

Vector spaces, Linear dependence and independence of vectors, Basis, Dimension, Linear transformations (maps), Range and Kernel of a linear map, Rank and Nullity, Inverse of a linear transformation, Rank-Nullity theorem (without proof).

Total Periods: 45

EXPERIENTIAL LEARNING

- A 100-gm mass is suspended from a spring with constant 50 N/m. It is set into motion by raising it 10 cm above its equilibrium position and giving it a velocity of 1 m/s downward. During the subsequent motion a damping force acts on the mass and the magnitude of this force is twice the velocity of the mass. If an impulse force of magnitude 2 N is applied vertically upward to the mass at t = 3 s, find the position of the mass for all time.
- 2. Develop a differential equation from an LRC circuit connected in series using Kirchoff Voltage law and then solve using Laplace transform. Analyze the result by using any technology.
- 3. Check that the complex numbers $C = \{x + iy/i^2 = -1, x, y \in \Re\}$, satisfy all of the conditions in the definition of vector space over C. Make sure you state carefully what your rules for vector addition and scalar multiplication.
- 4. Let Breakfast consists of orange juice, cereal, and eggs with the following nutritional information:

-				
		OJ	Cereal	Eggs
	Protein	0%	10%	20%
	Vitamin C	20%	15%	0%
	Calories	100	120	100

COURSE DESCRIPTION: This course provides a complete discussion about the wave theory of light, propagation of electromagnetic waves on a dielectric medium, and behavior of various semiconducting materials in addition to that dielectric, magnetic, nanomaterials, and superconducting materials. This course also provides hands-on experience on the above concepts.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Apply the concepts of light waves to interpret the concepts of Interference, Diffraction, and Polarization.
- **CO2.** Demonstrate the concepts of electromagnetic wave propagation in optical fibers.
- **CO3.** Understand the basic concepts of semiconductors in the functioning of various optoelectronic devices.
- **CO4.** Demonstrate the basic concepts of dielectric and magnetic properties in the behavior of the various dielectric polarizations and magnetic materials.
- **CO5.** Analyze the concepts of superconductors and nanomaterials to familiarize their applications in emerging fields.
- **CO6.** Work independently and in teams to solve problems with effective communications.

COURSE CONTENT

MODULE 1: WAVE OPTICS

Interference: Introduction- Interference in thin films (reflected light) - Newton's rings. **Diffraction:** Fraunhofer diffraction - Single slit diffraction (qualitative) - Double slit diffraction (qualitative).

Polarization: Polarization by reflection and double refraction - Nicol's prism - Half wave and Quarter wave plate - Engineering applications of interference, diffraction, and polarization.

ELECTROMAGNETIC WAVES AND FIBER OPTICS (09 Periods) Module 2:

Electromagnetic Waves: Divergence, Curl of Electric and Magnetic Fields - Maxwell's Equations (qualitative).

Fiber Optics: Introduction to fiber optics - Total Internal Reflection - Critical angle of propagation -Acceptance angle, Acceptance cone - Numerical Aperture - V number (qualitative) - Classification of fibers based on Refractive index profile, modes - Applications of optical fiber - Fiber optic Sensors (temperature, displacement).

SEMICONDUCTORS AND OPTOELECTRONIC DEVICES Module 3: (10 Periods)

Semiconductors: Introduction - Intrinsic semiconductors - Density of electrons in intrinsic semiconductor - Intrinsic carrier concentration - Fermi energy - Extrinsic semiconductors -Density of charge carriers in Extrinsic semiconductors (qualitative) - Drift and Diffusion currents - Direct and Indirect band gap semiconductors - Hall effect - pn junction

Optoelectronic devices: Light Emitting Diode (LED) – Photodiode - Semiconductor diode laser.

Module 4: DIELECTRICS AND MAGNETIC MATERIALS

Dielectric Materials: Introduction - Electric polarization - Types of polarizations (qualitative) - Frequency dependence of polarization - Lorentz (internal) field - Dielectric break down - Piezoelectricity - Applications of dielectrics.

Magnetic Materials: Introduction - Origin of magnetic moment - Classification of magnetic materials - Hysteresis loop - Soft and hard magnetic materials - Applications.

Module 5: SUPERCONDUCTORS AND NANOMATERIALS

Superconductors: Introduction – Critical parameters of Superconductors - Meissner effect - Types of Superconductors - BCS Theory - Applications of Superconductors.

Nanomaterials: Basic principles of nanomaterials - Synthesis of nanomaterials by Ball Milling and Pulsed Laser Deposition (PLD) methods - Properties of nanomaterials -Applications of nanomaterials.

Total Periods: 45

(09 Periods)

(09 Periods)

(08 Periods)

EXPERIENTIAL LEARNING

LIST OF EXPERIMENTS: (Minimum 10 experiments shall be conducted)

- 1. Find the thickness of a human hair using the interference technique.
- 2. Determination of the radius of curvature of the lens (or) wavelength of monochromatic source by forming Newton's ring.
- 3. Estimate the wavelength of a given laser source by using a diffraction grating.
- 4. Determination of the numerical aperture of a given optical fiber and hence estimate its acceptance angle.
- 5. Estimation of the number of charge carriers of a given semiconducting specimen by calculating Hall coefficients using the Hall apparatus.
- 6. Calculation of forward and reverse resistances of a p-n junction diode by studying I-V characteristic curves.
- 7. Prediction of the energy gap of a given semiconductor diode by varying the temperatures.
- 8. Estimation of threshold voltages of different LEDs by plotting I-V curves.
- 9. Study the characteristics of Photodiode by varying the intensity of light.
- 10. Estimation of the magnetic field along the axis of a circular coil carrying current using Stewart Gee's method.
- 11. Determination of wavelength of light by plane diffraction grating using spectrometer by minimum deviation method.
- 12. Determination of particle size using laser source with help of diffraction technique.

22LG107601	PROFESSIONAL ETHICS AND HUMAN VALUES	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					

Co-Requisite

COURSE DESCRIPTION: This course deals with personal conviction, and ethics and describes the accepted principles and standards of conduct regarding moral duties and virtues as applied to an organization. Codes of professional ethics guide the stakeholders of an organization about the desirable and undesirable acts related to the profession.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Demonstrate the principles of ethics, professional values, and social responsibility.
- **co2.** Analyze the problems in the implementation of moral autonomy and use ethical theories in resolving moral dilemmas.
- **CO3.** Develop suitable strategies to resolve problems that arise in practicing professional ethics and Industrial standards.
- **CO4.** Function as a member, consultant, manager, advisor and leader in multi-disciplinary teams.
- **CO5.** Provide solutions to complex problems associated with professional ethics using analysis and interpretation.

CO-PO Mapping Table:

Correlation Levels:

3: High; 2: Medium;

COURSE CONTENT

Module 1: PROFESSIONAL ETHICS

Scope and aim of ethics, Senses of ethics, Variety of moral issues, Types of inquiry, Moral dilemmas, Moral autonomy-Kohlberg's theory, Gilligan's theory, Consensus, and controversy.

Module 2: PROFESSIONAL IDEALS AND VIRTUES

Theories on virtues and ideals, Professions, Professionalism, Characteristics, Expectations, Professional responsibility, Integrity, Self-respect, Sense of responsibility, Self-interest, Customs and religion, Self-interest and ethical egoism, Customs and ethical relativism, Religion and divine command ethics, Use of ethical theories, Resolving moral dilemmas and moral leadership.

Module 3: SOCIAL EXPERIMENTATION

Experimentation, Similarities to standard experiments, Learning from the past and knowledge gained, responsible experimenters, Conscientiousness, Moral autonomy and accountability, The challenger case, Codes of ethics and limitations, Industrial standards and Problems with the law of engineering.

Module 4: RESPONSIBILITIES AND RIGHTS

Collegiality and loyalty, Respect for authority, Collective bargaining, Confidentiality, Conflict of interests, Occupational crime, Rights of engineers, Professional rights, Whistle-blowing, The BART case, Employee rights, and discrimination.

Module 5: HARMONY WITH PROFESSIONAL ETHICS

Acceptance of human values; Ethical Human Conduct; Basis for Humanistic Education, Constitution, and Universal Order; Competence in professional ethics; Case studies: Holistic technologies, Management Models and Production Systems; Transition from the present state to Universal Human Order: socially and ecologically responsible engineers, technologists and managers - enriching institutions and organizations.

Total Periods: 30

EXPERIENTIAL LEARNING

- Demonstrate orally using your experiences of what is naturally acceptable in a relationship

 Feeling of respect or disrespect and what is naturally acceptable is to nurture or exploit others.
- 2. Identify community partners and discuss with a community partner or organization. Prepare a report by identifying and analysing the issues or opportunities.
- 3. Field experiences may be directed to include a range of time-intensive endeavours that require varying levels of student interaction. Prepare a report on visiting a Juvenile home.
- 4. Students read a speech in the classroom by former United Nations Secretary-General Kofi Annan on human values.
- 5. Students are encouraged to bring a daily newspaper to class or to access any news related to the need for human values and note down the points.
- 6. Bring out the relevance of engineering ethics theory and practice with relevance to current trends.
- 7. Professional ideals and virtues are important to everyone. Prepare a case study on the professional ideals and virtue of any one of the famous sports personalities from India.
- 8. Compare the present to the past in engineering experimentations concerning the change in professionalism.
- 9. Make a study on occupational crime and the role of modern technology in finding solutions.
- 10. Prepare a case study on how to maintain harmony with different cultural people using professional ethics.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE DESCRIPTION: This course provides a detailed discussion on natural resources, ecosystems, biodiversity, environment pollution and control, social issues and environment, human population and environment.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Analyze natural resources to solve complex environmental problems and natural resource management considering society, environment and sustainability.
- **CO2.** Analyze ecosystems and biodiversity to solve complex environmental problems by following environmental ethics considering society, environment and sustainability besides communicating effectively in graphical form.
- **CO3.** Analyze various types of pollution and their control measures to solve environmental problems through appropriate tools and techniques following latest developments considering society, ethics, environment and sustainability.
- **CO4.** Analyze social issues and its impact on environment, environmental acts to solve complex environmental problems considering society, environment and sustainability besides communicating effectively in graphical form.
- **CO5.** Analyze human population and its impact on environment to solve complex environmental problems through team work and using appropriate tools and techniques considering ethics, society, environment and sustainability.

CO-PO Mapping Table:

Correlation Levels:

3: High; 2: Medium;

COURSE CONTENT

Module 1: NATURAL RESOURCES

Multidisciplinary nature of environment; Natural Resources: Renewable and non-renewable resources; Forest, Water, Mineral, Food and Energy resources -Causes, Effects, Remedies, Case studies; Role of an individual in conservation of natural resource and equitable use of resources for sustainable lifestyles.

Module 2: ECOSYSTEMS AND BIODIVERSITY

Ecosystems: Concept of an ecosystem, Structure and function of an ecosystem - Producers, Consumers, Decomposers; Food chains, Food webs, Ecological pyramids – Types; Characteristic features, Structure and functions of forest ecosystem, Desert ecosystem, Aquatic ecosystem.

Biodiversity: Concept and value of biodiversity, Role of biodiversity in addressing new millennium challenges, Hot spots of biodiversity, Threats to biodiversity, Man-wild life conflicts, Endemic, Endangered and extinct species of India, Conservation of biodiversity – In-situ and ex-situ.

Module 3: ENVIRONMENTAL POLLUTION AND CONTROL

Causes, Adverse effects and control measures of pollution - Air pollution, Water pollution, Soil pollution, Noise pollution, Thermal pollution, Nuclear pollution, Solid waste management - Urban waste, industrial waste; Latest developments in pollution control, Hazards and disaster management - Floods, Earthquakes, Tsunamis, Case studies.

Module 4: SOCIAL ISSUES AND THE ENVIRONMENT

Sustainable development, Urban problems related to energy, Environmental ethics –Issues, Solutions; Global warming, Acid rain, Ozone layer depletion, Nuclear accidents and case studies, Wasteland reclamation, Consumerism and waste products, Concept of green technologies, Environment justice: National Green Tribunal and its importance; Environment protection act, Air act, Water act, Wildlife protection act, Forest conservation act, Issues involved in enforcement of environmental legislation, Public environmental awareness.

Module 5: HUMAN POPULATION AND THE ENVIRONMENT

Population growth, Population characteristics and variation among nations, Population explosion, Family welfare programme, Environment and human health, Human rights, Value education, HIV/AIDS, Women and child welfare, Role of information technology in environment and human health; Case studies - Field Work/Assignment/Seminar on Environmental assets - Water bodies/Forest/Grassland/Hill/Mountain.

Total Periods: 30

EXPERIENTIAL LEARNING

- 1. Visit a nearby villages and know the status of availability of local resources that can be improved through proper education.
- 2. Make an awareness program in the villages for the development of natural resources, ecosystems and biodiversity.
- 3. Prepare a document by visiting a local urban waste dumping yard near to the Tirupati city.
- 4. Visit a local village and find a barren land and make the land into a useful land by planting plants or providing the soil and fertilizers required to improve the soil.
- 5. Visit a local zoological park and identify the species variety and variability.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE DESCRIPTION: This course provides a detailed discussion on technology for rural development, nonconventional energy, technologies for rural development, community development and it in rural development.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Compare various technologies for rural development by solving rural problems through different schemes by considering ethics, society, environment and sustainability.
- **CO2.** Analyze non-conventional energy sources using appropriate tools and techniques to solve rural energy problems considering society, environment and sustainability besides communicating effectively in graphical form.
- **CO3.** Select appropriate technologies in different areas of rural development to solve rural issues following latest developments considering society, environment and sustainability.
- **CO4.** Relate water conservation, health, safety and rural employment issues for community development to solve rural problems through appropriate technologies considering ethics, society, environment and sustainability.
- **CO5.** Analyze the impact of IT, public and private partnership on rural development to solve complex rural problems using appropriate tools and techniques considering ethics, society, environment and sustainability.

COURSE CONTENT

Module 1: INTRODUCTION TO RURAL DEVLOPMENT

India - Technology and rural development, Pre and post-independence period, Rural India Life, Indian farmer, Role of science and technology in rural development, Rural technology and poverty eradication, Rural business hubs, Technology in improving rural infrastructure, Various organizations related to innovation, Issues of technology transfer - CAPART, NABARD, CSIR, NIF.

Module 2: NON CONVENTIONAL ENERGY

Definition of energy, Types of alternative sources of energy, Sources of non conventional energy – Solar energy: Solar pump in agriculture, Solar dryer, Solar cooker, Solar heater; Biogas, Recycling and management, Wastes conservation, Assessment and production of biomass products and their utilization.

Module 3: TECHNOLOGIES FOR RURAL DEVELOPMENT (06 Periods)

Food and agro based technologies, Tissue culture, Nursery, Building and construction technologies, Cultivation and processing of economic plants, Cottage and social industries, Latest developments in rural technologies.

Module 4: COMMUNITY DEVELOPMENT

Water conservation, Rain water Harvesting, Drinking water Standards and simple treatments used, Environment and Sanitation, Bio fertilizers, Medical and aromatic plants, Employment generating technologies – Apiculture, Pisciculture, Aquaculture.

Module 5: IT IN RURAL DEVELOPMENT

Role of information technology (IT) in rural areas, Impact of IT in rural development, Need and necessity of technology, Corporate social responsibilities, Private sector participation (Activities in different spheres: Employment, Education, Health, Agriculture and service sectors) and Saansad Adarsh Gram Yojana (SAGY), Village adoption schemes.

Total Periods: 30

EXPERIENTIAL LEARNING

- 1. Visit a nearby village and know the status of small scale industries which are implanted and to be established based on the availability of the local resources.
- 2. Visit a local village and make an awareness program on energy utilization using biomass products.
- 3. Make a awareness program in the villages for the rural development in terms of homemade products.
- 4. Construct rain water harvesting structures in nearby villages where water scarcity is more and prepare a document.
- 5. Develop a small IT application the village area which will be used for the growth of the village.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

COURSE DESCRIPTION: This course deals with the development of fluency and intelligibility in spoken English. Through individual and group activities, students work on improving pronunciation, practicing conversation strategies, and delivering oral presentations.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Demonstrate knowledge of functional English for effective communication.
- **CO2.** Analyze different types of vocabulary for fluency in communication
- **CO3.** Apply correct usage of English grammar in writing and speaking.
- **CO4.** Apply speaking strategies in terms of usage of English with accuracy, appropriacy, and fluency.
- **CO5.** Analyze techniques to use communication skills for effective presentation.

COURSE CONTENT

Module 1: FUNCTIONAL ENGLISH

(06 Periods)

Concepts of Functional Spoken English, Self-Introduction; Listening and Speaking: Do's and Don'ts; Expressions: Ability, Admiration, Agreement, Annoyance, Appreciation, Pleasure, Sarcasm, Satisfaction, Surprise, Approval, Certainty, Doubt, Gratitude, Possibility, Fear, Worry, Condolences; Asking for: Advice, Clarification, Direction, Information, Permission; Making: Predictions, recommendations

Module 2: VOCABULARY BUILDING

Vocabulary for day-to-day conversations: Vegetables, Groceries, Fruits, Weather, Parts of a Human body, Dresses, Furniture; Relations: Birds, Cries of Animals, Food, Hospitality, Houses, Rooms, Tools, Airport, News Paper, Books, Gems, Corporate Vocabulary, Jobs, Occupations, Diseases; British and American spelling; Slang Words and Technical Jargons.

Module 3: FUNCTIONAL GRAMMAR - I

English Grammar and the Indian Student, Parts of Speech, Verb forms: Tenses, Voice and Speech.

Module 4: FUNCTIONAL GRAMMAR -II

Universal Auxiliaries: Sentence Structure, WH Questions, framing of Questions with answers; Question Tags, Subject and verb agreement, Spotting Errors.

Module 5: COMMUNICATION SKILLS:

Polite, Courteous and diplomatic expressions, Good manners and Etiquette, Conversation Techniques, Narrating Stories.

Total Periods: 30

EXPERIENTIAL LEARNING

- 1. Critically analyse the value of Indian money and its impact on the common man and Prepare a PowerPoint Presentation.
- 2. Prepare a conversation between you and a sanitary officer regarding sanitary conditions in your locality.
- 3. The English Language has a rich vocabulary and it increases day by day. Present a seminar on the norms adhered to in adding new words and list out the words added in the last five years with their meaning.
- 4. Enact roleplays in different situations.
- 5. Participate in group discussions and debate on present issues
- 6. A conversation is an exchange of ideas, thoughts, and feelings between two or more persons. Explain it with suitable examples
- 7. Prepare a schedule and identify various committees to be formed for celebrating the Annual Day of a college and explain team involvement in the celebration.
- 8. Gather various ideas on discussing with parents the role of higher education and job opportunities.
- 9. Imagine you see a person wasting water. Write a dialogue objecting to such wastage of natural resources.
- 10. Since social media offers a wide reach easily, it becomes easier for bullies to spread gossip or issue threats. How do you think Cybercrime is a menace brought about by social media?

COURSE DESCRIPTION: This course deals with the enhancement of employability skills and maximizes the potential by introducing the principles that are for personal and professional success, and helping to apply them in their lives and careers.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1**. Demonstrate life skills required in personal and professional life.
- **CO2.** Analyse well-defined techniques to cope with emotions and stress.
- **CO3.** Apply appropriate thinking and problem-solving methods to solve problems.
- **CO4.** Function effectively in a team and as an individual.
- **CO5.** Demonstrate the qualities of an effective leader.

B.Tech. - Electronics and Communication Engineering

COURSE CONTENT

Module 1: OVERVIEW OF LIFE SKILLS

Meaning and significance of life skills, Life skills identified by WHO: Self-awareness, Empathy, Critical thinking, Creative thinking, Decision making, problem-solving, Effective Communication, interpersonal relationships, coping with stress, coping with emotion. Ethics, Moral & Professional Values: Human Values, Civic Rights, Engineering Ethics, Engineering as Social Experimentation, Environmental Ethics, Global Issues, Code of Ethics like ASME, ASCE, IEEE.

Module 2: STRESS MANAGEMENT

Stress Management: Stress, reasons, and effects, identifying stress, stress diaries, the four A's of stress management, techniques, **Approaches**: action-oriented, emotion-oriented, acceptance oriented, resilience, Gratitude Training, **Coping with emotions**: Identifying and managing emotions, harmful ways of dealing with emotions, PATH method, and relaxation techniques.

Module 3: TRANSFORMATIONAL SKILLS

Creativity, Critical Thinking, Collaboration, Problem Solving, Decision Making, Need for Creativity in the 21st century, Imagination, Intuition, Experience, Sources of Creativity, Lateral Thinking, Myths of creativity, Critical thinking Vs Creative thinking, Functions of Left Brain & Right brain, Convergent & Divergent Thinking, Critical reading & Multiple Intelligence.

Module 4: GROUP AND TEAM DYNAMICS

Introduction to Groups: formation of the group, thinking strategies, Clarifying expectations, Problem Solving, Consensus, Dynamic techniques, Group vs Team, Team Dynamics, and Virtual Teams. Managing team performance and managing conflicts, Intrapreneurship.

Module 5: LEADERSHIP

Leadership framework, entrepreneurial and moral leadership, vision, cultural dimensions. Growing as a leader, managing diverse stakeholders, crisis management. Types of Leadership, Traits, Styles, VUCA Leadership, Levels of Leadership, Transactional vs Transformational Leaders, Leadership Grid, Effective Leaders.

- EXPERIENTIAL LEARNING
- 1. Prepare an attitude test by making small groups in the class and measure the attitudes of students in your class.
- 2. Students are psychologically pressurized for qualifying in campus interviews. Prepare a Case study on the Campus Interview pressure and stress of students using SWOT analysis.
- 3. Record and prepare a video presentation on people of different cultures and make a comment on their accents.
- 4. The qualities of the leaders play an important role in their success. Prepare a short film about a leader and list out the best qualities.
- 5. In the present context, social media plays a vital role in the success of leaders and the wide spread of their principles. Prepare a presentation on the impact of social media on a success of a leader.

(06 Periods)

(06 Periods)

(06 Periods)

(06 Periods)

(06 Periods)

Total Periods: 30

- Knowledge of present technologies helps us to live a harmonious life.' Make a video to justify the statement.
- 7. Prepare a PowerPoint presentation on life skills needed in our day-to-day life and their importance.
- 8. Every person wants to be successful in their personal and professional life and apply various strategies for that. List out the strategies to become successful in one's professional life.
- 9. A boy/girl who is a neighbour feels depressed for not being given with mobile for playing video games. Find methods and solutions to overcome the self-pity of the boy/girl.
- 10. Identify the persons who are irregular to class. Find out their problems and come up with solutions.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22EE107001	INTELLECTUAL PROPERTY RIGHTS	2	-	-	-	2
Pre-Requisite	-					
Anti-Requisite	-					
Co-Requisite	-					

COURSE DESCRIPTION: The course is designed to provide comprehensive knowledge to the students regarding the general principles of intellectual property rights, Concept and Theories, Criticisms of Intellectual Property Rights, International Regime Relating to IPR. The course provides an awareness on how to protect ones unique creation, claim ownership, knowledge of what falls under the purview of someone's rights and what doesn't, and safeguard their creations and gain a competitive edge over the peers.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Understand the need and the concepts of intellectual property right and avenues for filling intellectual property rights.
- **CO2.** Understand the legislative practices and protocols for acquisition of trademark and the judicial consequences for violating laws of trademark protection.
- **CO3.** Understand the legislative practices and protocols for acquisition of copyrights and the judicial consequences for violating laws of copyrights protection.
- **CO4.** Understand the fundamentals of patent laws, legislative practices and protocols for acquisition of trade secrets and the judicial consequences for violating laws of trade secrets protection.
- **CO5.** Understand the importance of geographical indications and various laws and protocols for protecting geographical indications.

CO-PO Mapping Table:

Correlation Levels:

3: High; 2: Medium;

COURSE CONTENT

Module 1: INTRODUCTION TO INTELLECTUAL PROPERTY RIGHTS (06 Periods)

Introduction and the need for intellectual property rights (IPR); types of intellectual property- Design; International organizations, agencies and treaties.

Module 2: TRADEMARKS

Introduction to trademark, Purpose and function of trademarks, acquisition of trade mark rights, protectable matter, selecting and evaluating trade mark, trade mark registration processes.

Module 3: LAW OF COPYRIGHTS

Fundamental of copy right law, originality of material, rights of reproduction, rights to perform the work publicly, copy right ownership issues, copy right registration, notice of copy right, international copy right law.

Law of patents: Foundation of patent law, patent searching process, ownership rights and transfer.

Module 4: TRADE SECRETS

Trade secrete law, determination of trade secrete status, liability for misappropriations of trade secrets, protection for submission, trade secrete litigation.

Unfair competition: Misappropriation right of publicity, false advertising.

Module 5: GEOGRAPHICAL INDICATIONS

The Geographical indications law in India, The objectives and features, the registry of geographical indications powers and functions. Types of goods offered. Protection: Agriculture goods, manufactured goods and natural goods. Registration of indications and the requirements. Prohibition of misleading use of indications of geographical origins, prohibition of dilution of geographical origins.

Total Periods: 30

EXPERIENTIAL LEARNING

- Should conduct a survey based on the real scenario, where IPR is misused or unethically 1 used and present an article.
- 2. Prepare an article on the registration processes of IPR practically (copy right/trade mark/ patents).
- Should study a case of conflict on trademarks/patents and should produce an article 3. mentioning the circumstances and remedial measures.
- Prepare an article on the latest development in the international intellectual property 4. riahts.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

FUNDAMENTALS OF RESEARCH METHODOLOGY

Pre-Requisite

Anti-Requisite

_

_

Co-Requisite

COURSE DESCRIPTION: The course is developed for the students' to understand the underlying concepts of research methodology and a systematic approach for carrying out research in the domain of interest. The course is emphasised on developing skills to recognise and reflect the strength and limitation of different types of research; data collection methods, methods of Processing and analysing data. The course also emphasises on interpreting the findings and research articulating skills.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Understands the underlying concepts of research methodology, types of research and the systematic research process.
- **CO2.** Understand the philosophy of research design, types of research design and develop skills for a good research design.
- **co3.** Understand the philosophy of formulation of research problem, methods of data collection, review of literature and formulation of working hypothesis.
- **CO4.** Understand various data processing and analysing techniques and their significance in research.
- **CO5.** Develop skills to interpret the findings and research articulating skills along with the ethics of research.

CO-PO-PSO Mapping Table:

Correlation Levels:

3: High; 2: Medium;
Module 1: INTRODUCTION TO RESEARCH METHODOLOGY

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research and Scientific Method, Research Process, Criteria of Good Research.

Module 2: RESEARCH DESIGN

Research design—Basic Principles, Need of research design, Features of good design, Important concepts relating to research design, Different research designs, Basic principles of experimental designs, Developing a research plan.

Module 3: RESEARCH FORMULATION

Defining and formulating the research problem - Selecting the problem - Necessity of defining the problem - Importance of literature review in defining a problem – Data collection – Primary and secondary sources; Critical literature review – Identifying gap areas from literature review, Development of working hypothesis.

Module 4: PROCESSING AND ANALYSIS OF DATA

Processing Operations, Elements/Types of Analysis, Statistics in Research, Measures of Central Tendency, Measures of Dispersion, Measures of Relationship, Simple Regression Analysis.

Module 5: INTERPRETATION AND REPORT WRITING

Interpretation: Meaning of interpretation; Techniques of interpretation; Precautions in Interpretation.

Report Writing: Significance, Different Steps, Layout, Types of reports, Mechanics of Writing a Research Report, Precautions in Writing Reports.

Total Periods: 30

EXPERIENTIAL LEARNING

- 1. Should conduct a survey based on a hypothesis, analyze the data collected and draw the inferences from the data.
- 2. Should review the literature on the given topic and should identify the scope/gaps in the literature and develop a research hypothesis.
- 3. Should study a case, formulate the hypothesis and identify an appropriate testing technique for the hypothesis.
- 4. Study an article and submit a report on the inferences and should interpret the findings of the article.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

Course Code	Course Title	L	т	Ρ	S	С
22EE102403	NETWORK ANALYSIS	3	-	2	-	4
Pre-Requisite	Fundamentals of Electrical Engineering.					
Anti-Requisite	Electrical Circuits; Signals and Networks.					
Co-Requisite	-					

COURSE DESCRIPTION: This course is designed to provide an overview on Networks and their analysing techniques. The course provides a deep insight and hands-on experience on the various concepts such as network analysis using network theorems, analysis of poly phase circuits, analysis of two-port networks and transients. The course also emphasis on design and analysis aspects of passive filters.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Analyze electrical circuits, by applying network theorems and determine various electrical quantities.
- **CO2.** Analyze 3-phase circuits, to determine various electrical quantities and assert the relation between the circuit variables.
- **CO3.** Analyze network parameters of an isolated and interconnected two-port networks.
- **CO4.** Analyze transient behaviour of DC & AC circuits by using time domain approach and Laplace transform methods.
- **CO5.** Design an appropriate filter network for the given specifications.
- **CO6.** Work independently or in teams to solve problems with effective communication.

CO-PO-PSO Mapping Table:

Correlation Levels:

3: High;

Module 1: NETWORK THEOREMS

Superposition, Thevenin's, Norton's, Maximum power transfer, Millmann's and Reciprocity theorems for DC & AC Excitations (without proof).

Module 2: POLY-PHASE CIRCUITS

Advantages of poly-phase system; Analysis of three phase balanced and unbalanced systems; Measurement of active and reactive power in balanced and unbalanced systems-single wattmeter and two wattmeter methods.

Module 3: TWO-PORT NETWORKS

Network Functions - Driving point and transfer functions; Impedance parameters, admittance parameters, transmission (ABCD) parameters, hybrid parameters; conditions for reciprocity and symmetry; conversion of one parameter to another; interconnection of two-port networks in series, parallel and cascaded configurations.

Module 4: TRANSIENT ANALYSIS

Transient response of RL, RC and RLC for DC excitation and Sinusoidal excitation - Solution by using Differential equation and Laplace Transform methods.

Module 5: PASSIVE FILTERS

Classification of filters, filter networks; Analysis of filter networks - attenuation, phase shift, characteristic impedance in pass band and stop band, constant-K low pass and high pass filters, m-derived filters; Design of filters.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

Pre-Lab: Demonstration of bread board and connections, component identification, Meters for measurement of electrical quantities.

- 1. Verification of Superposition theorem.
- 2. Verification of Thevinan's and Nortorn's theorem.
- 3. Verification of Maximum power transfer theorem for DC and AC excitations.
- 4. Verification of Reciprocity theorem.
- 5. Measurement of active and reactive power in three phase circuits.
- 6. Measurement of reactive power using single wattmeter in three phase circuits.

Perform the Experiments using simulation tools

Pre-lab: Demonstrate the fundamentals of MATLAB and SIMULINK tool box

- 7. Determine Two-port network parameters for an isolated network.
- 8. Determine Two-port network parameters for an interconnected two two-port networks.

COURSE DESCRIPTION: This course provides a detailed discussion and hands on experience on semiconductor devices like transistors, MOSFETs and their applications like amplifiers and oscillators.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Understand the operation of various semiconductor diodes.
- **CO2.** Analyze the applications of semiconductor diodes.
- **CO3.** Analyze various configurations and biasing techniques for BJT and FET.
- **CO4.** Design various Oscillators for desired specifications.
- **CO5.** Work independently and in teams to solve problems with effective communication.

COURSE CONTENT

Module 1: SEMICONDUCTOR DIODES

Introduction, Semiconductor diodes, ideal versus practical diodes, resistance levels, Diode equivalent circuits, transition and diffusion capacitance, reverse recovery time, diode specification sheet, zener diode, Light Emitting diode, Tunnel diode, schottky diode, varicap diode.

(08 Periods)

Module 2: DIODE CIRCUITS

Introduction, Series Diode configuration, Parallel and series-parallel configurations, Halfwave & Full wave rectifier, Clippers, Clampers, Zener Diode as voltage regulator, Problems.

Module 3: BIPOLAR JUNCTION TRANSISTOR

Introduction, Transistor construction, Operation, Common-base configuration, Transistor as an amplifier, Common-Emitter configuration, Common collector configuration, Operating point, Fixed biased configuration, Emitter-bias configuration, Voltage divider bias configuration, Collector feedback configuration, compensation Techniques, Problems.

Module 4: FIELD-EFFECT TRANSISTORS

JFET -construction, operation and characteristics, MOSFET - Device Structure and Physical Operation, Current-Voltage Characteristics, The MOSFET as an Amplifier and as a Switch, Biasing in MOS Amplifier Circuits, Small-Signal Operation and Models, The Depletion-Type MOSFET.

Module 5: OSCILLATORS

Introduction, Feedback Oscillators, Oscillation with RC Feedback Circuits, Wien Bridge Oscillator, Phase Shift Oscillator, Oscillation with LC Feedback Circuits, crystal oscillator.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES:

- 1. Verification of switching action of a PN junction diode with V-I characteristics.
- 2. Rectify the AC signal and then to find out Ripple factor and percentage of Regulation in Half wave/Full wave rectifier with and without Capacitor filter.
- 3. Verify input and output characteristics of transistor in common base and common emitter configurations.
- 4. Study and draw the Drain and Transfer Characteristics of a JFET.
- 5. Design and analyze any biasing circuit using BJT.
- 6. Study the characteristics of an emitter follower circuit.
- 7. Design RC integrator and differentiator and determine their response to the square input.
- 8. Develop clipper circuit to clip positive and negative portions of the input waveform with two reference voltages.
- 9. Develop clamping circuits to clamp different positive and negative dc levels of the input signal.
- 10. Design and Verification of RC and LC Oscillators.
- 11. Study and experimental verification of MOSFET Transfer characteristics (with depletion and enhancement mode)

COURSE DESCRIPTION: This course provides a detailed discussion on the Science of Measurement; Construction and principle of operation of Ammeters, Voltmeters, Ohmmeters; Potentiometers; Design of Bridges, Signal Analysers and Oscilloscopes; Transducers; Display Devices, and Recorders.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Select the suitable measuring instruments to measure parameters like voltage, current, resistance by applying fundamental concepts of Measuring.
- **CO2.** Identify the suitable transducers for the measurement of non-electrical parameters.
- **CO3.** Design AC and DC bridges for measurement of resistance, capacitance, and Inductance.
- **CO4.** Analyze the characteristics of the signal using suitable signal analyser.
- **CO5.** Apply suitable display devices and recorders based on the application.

CO-PO-PSO Mapping Table:

Correlation Levels:

3: High; 2: Medium;

Module 1: MEASUREMENTS AND MEASURING DEVICES

Introduction to Measurement System: Elements of a Generalized Measurement System, Types of Errors.

Characteristics of Transducers: Transducer Principle, Classification of transducers, Static Characteristics of transducers: Accuracy, Precision, Threshold, Resolution, Sensitivity, Linearity, Span and Calibration. Dynamic characteristics of transducers: Fidelity, Measuring Lag, Dynamic Error, Speed of Response and Statistical Analysis.

Measuring Devices: Ammeters – Multi range, Universal Shunt, Extending Ranges; DC voltmeters – Multi range, Range extension, AC voltmeters – Rectifier type, Thermocouple Type; Ohmmeters - Series type and Shunt type.

Module 2: SENSORS AND THEIR APPLICATIONS

Resistive Sensor: Potentiometer, Strain gauges & its types and applications. **Capacitive Sensors:** Change in overlapping area, dielectric constant and distance between the plates and applications.

Inductive sensors: Variable reluctance, Eddy current, linear variable differential transformers, Hall Effect. Piezoelectric sensors and applications.

Ultrasonic sensor: Attenuation, Transit time, Doppler Effect and applications.

Temperature Sensors: Resistance temperature detector (RTD), Thermistors principle and types, Thermocouples and applications.

Module 3: BRIDGES

Measurement of Resistance: Medium Resistance Measurement: Wheatstone bridge, Kelvin Bridge; Low Resistance Measurement: Kelvin double bridge; High Resistance Measurement: Direct deflection methods.

Measurement of Inductance: Maxwell Bridge, Hay's Bridge and Anderson Bridge. **Measurement of capacitance:** De Sauty's Bridge and Schering bridge, Q-meter.

Module 4: SIGNAL ANALYZERS AND OSCILLOSCOPES

Signal Analyzers: Wave analysers -Frequency Selective Wave Analyzer, Heterodyne Wave Analyser, Application of Wave Analyzers, Harmonic Distortion Analyzers, Total Harmonic Distortion; Spectrum Analyzers – Basic Spectrum Analyzer, Spectral Displays, Spectra of Different Spectrum Analyzers.

Oscilloscopes: Oscilloscope Block diagram, Cathode Ray Tube, Vertical Deflection System, Delay Line, Horizontal Deflection System - Triggered Sweep, Delayed sweep; CRO Probes, Dual Beam & Trace CROs, Measurement of Amplitude, Frequency and Phase (Lissajous method), Sampling Oscilloscope, Analog Storage Oscilloscope, Digital Storage Oscilloscope.

Module 5: DISPLAY DEVICES AND RECORDERS

Display Devices: Segment Displays – Seven Segment Display, LCD,TFT-LCD, Display, BCD to 7 Segment Converter, Plasma display panels.

Recorders: Objectives and Requirements of Recording Data, Recorder Specifications, Strip Chart Recorder and X-Y Recorder, Potentiometric Recorder, Digital Data Recording, Recorder Selections for Particular Applications.

Total Periods: 45

(11 Periods)

(10 Periods)

(09 Periods)

(08 Periods)

(07 Periods)

EXPERIENTIAL LEARNING

- 1. Convert Linear displacement in to voltage using linear variable differential transducer set up.
- 2. Simulate wheat stone using Multisim and find change in resistance.
- 3. Simulate Wein bridge using Multisim and find change in capacitance.
- 4. Develop a model and verify the working of seven segment display.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

22EC101004	ELECTROMAGNETIC THEORY AND TRANSMISSION LINES	3	-	-	-
Pre-Requisite	Engineering Physics				
Anti-Requisite	-				
Co-Requisite	-				

COURSE DESCRIPTION: This course provides a detailed discussion on Static Electric & Magnetic Fields; Maxwell's Equations; Electromagnetic Wave Propagation; Transmission Lines.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- Analyze time invariant electromagnetic field equations in different media. CO1.
- Solve problems on time variant electromagnetic fields using Maxwell's Equations. CO2.
- Understand the Transmission Lines concepts, Reflection and Refraction of Uniform CO3. Plane Waves for Electromagnetic Wave Propagation in various media.
- Design impedance transformers by applying impedance matching techniques for CO4. maximum power transfer in transmission Lines.

С

3

Module 1: ELECTROSTATIC FIELDS

Review of calculus and vector algebra. Coulomb's Law, Electric Field Intensity - Fields due to point, Line Charge and Surface Charge distributions. Electric Flux Density, Gauss Law and Applications, Electric Potential, Relations between E and V, Convection and Conduction Currents, Continuity Equation. Capacitance - Parallel Plate, Coaxial Capacitors, Illustrative Problems.

Module 2: **MAGNETOSTATIC FIELDS**

Biot-Savart's Law, Ampere's Circuital Law, Magnetic Flux Density. Magnetic Scalar and Vector Potentials, Forces due to Magnetic Fields, Ampere's Force Law, Illustrative Problems.

Module 3: MAXWELL'S EQUATIONS AND BOUNDARY CONDITIONS (09 Periods)

Maxwell's Equations: Faraday's Law and Transformer EMF, Inconsistency of Ampere's Law and Displacement Current Density, Maxwell's Equations in Different Final Forms and Word Statements (time variant and invariant).

Boundary Conditions: Conditions at a Boundary Surface: Dielectric-Dielectric and Dielectric-Conductor Interfaces, Illustrative Problems.

Module 4: ELECTROMAGNETIC WAVE PROPAGATION

Wave Equations for Conducting and Perfect Dielectric Media, Uniform Plane Waves -Definition, Sinusoidal Variations, Poynting Theorem. Wave Propagation in Lossless and Conducting Media.Conductors & Dielectrics - Characterization, Wave Propagation in Good Conductors and Good Dielectrics, Polarization.

Reflection and Refraction of plane waves – Normal and oblique Incidences, Brewster's Angle, Critical angle and Total Internal Reflection, Illustrative Problems.

Module 5: TRANSMISSION LINES

Types, Parameters, Transmission Line Equations, Primary & Secondary Constants, Expressions for Characteristic Impedance, Propagation Constant, Phase and Group Velocities, Infinite Line Concepts, Lossless line Characteristics, Condition for Distortionless Lines. Input Impedance Relations, SC and OC Lines, Reflection Coefficient, VSWR. $\lambda/4$, $\lambda/2$, $\lambda/8$ Lines – Impedance Transformations. Smith Chart – Configuration and Applications, Single stub matching, Illustrative Problems.

Total Periods: 45

EXPERIENTIAL LEARNING

- 1. Plot and visualize Electromagnetic Fields due to point charge, line charge and volume charge using MATLAB.
- 2. Estimation of energy storage in Parallel-Plate Capacitor, cylindrical co-ordinates due the electric field using MATLAB
- 3. Understand Electric /Magnetic field characteristics across various boundary interfaces using MATLAB
- Analyse transmission lines parameters using smith chart using MATLAB 4.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

Pre-Requisite	Transformation Techniques and Linear Algebra					
Anti-Requisite	-					

Co-Requisite

COURSE DESCRIPTION: This course provides a detailed discussion on analysis of signals and systems; Representation of signals using Fourier series and Fourier transforms; Time-Domain and Frequency-Domain aspects of signals and systems; concept of convolution and correlation; Sampling and types of sampling; Applications of Laplace transform of signals; Z-Transform of discrete-time sequences.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- Understand the basic operations on signals & sequences and determine the response CO1. of LTI systems using convolution.
- Apply Fourier series and transform to analyse spectral characteristics of continuous-CO2. time periodic and aperiodic signals.
- Analyse the properties of correlation and convolution to extract signals from noisy CO3. signal in various applications.
- Analyse sampling & it's effects and reconstruct signals using interpolation. CO4.
- CO5. Apply Laplace and Z-transformation techniques to analyse the characteristics of systems.

CO-PO-PSO Mapping Table:

Correlation Levels:

3: High;

UNIT-I: **INTRODUCTION TO SIGNALS AND SYSTEMS**

Elementary signals- Unit Impulse and Unit Step Functions, Exponential and Sinusoidal Signals. Classification of Continuous- Time and Discrete-Time Signals, Basic operations on signals, Classification of Continuous-Time and Discrete-Time Systems, Basic System Properties, Linear Time-Invariant Systems -Discrete-Time LTI Systems- The Convolution Sum, Continuous-Time LTI Systems -Convolution Integral, Properties of Linear Time-Invariant Systems.

UNIT-II: FOURIER SERIES AND FOURIER TRANSFORM

Fourier series: Representation of Fourier series, Continuous time periodic signals, Dirichlet's conditions, Trigonometric and Exponential Fourier Series with examples.

Fourier Transforms: Deriving Fourier Transform from Fourier series, Fourier Transform of standard signals, Fourier Transform of Periodic Signals, Properties of CT Fourier Transform, Systems characterized by Linear constant coefficient differential equations. The Magnitude-Phase Representation of the Fourier Transform, The Magnitude-Phase Representation of the Frequency Response of LTI Systems.

UNIT-III: CORRELATION OF SIGNALS

Cross correlation and auto correlation of functions, properties of correlation function, Energy density spectrum, Power density spectrum, Relation between auto correlation function and energy/power spectral density function. Relation between convolution and correlation, Detection of periodic signals in the presence of noise by correlation in radar systems, Extraction of signal from noise by filtering.

UNIT-IV: SAMPLING

Representation of a Continuous-Time Signal by its Samples - Sampling Theorem, Reconstruction of a Signal from Its Samples Using Interpolation. Effect of under sampling -Aliasing, Discrete-Time Processing of Continuous-Time Signals.

LAPLACE AND Z-TRANSFORMS UNIT-V:

Laplace Transforms: The Laplace Transform, The Region of Convergence for Laplace Transforms, The Inverse Laplace Transform, Statements of Properties of the Laplace Transform, Some Laplace Transform Pairs, Analysis and Characterization of LTI Systems Using the Laplace Transform.

Z-Transforms: Introduction, The Z-Transform, The Region of Convergence for Z-Transform, The Inverse Z-Transform, statements of Properties of Z-Transform.

Total Periods: 45

EXPERIENTIAL LEARNING

- 1. Record sound from different sources and create an audio library
- 2. Analyse Fourier transform of various signals from audio library
- Design a Filter to eliminate noise in the Recorded signals 3.

(Note: It's an indicative one. The course instructor may change the activities and the same shall be reflected in course handout.)

Co-Requisite	-					

COURSE DESCRIPTION: This course provides a detailed discussion and hands on experience on Number systems, Boolean algebra, Minimization of Boolean functions, Analysis and synthesis of digital circuits; Asynchronous Sequential Logic & Programmable Memories.

COURSE OUTCOMES: After successful completion of the course, students will be able to:

- **CO1.** Design logical circuits by analyzing various Boolean functions and simplification methods to perform desired logical operations using logical gates.
- **CO2.** Design combinational logical circuits for performing various arithmetic operations and data encoding and decoding in various data lines.
- **CO3.** Analyze various sequential circuits for realizing counters and registers using flip-flops
- **CO4.** Design Asynchronous sequential logic and programmable memories for societal needs.
- **CO5.** Work independently and in teams to solve problems with effective communication.

B.Tech. – Electronics and Communication Engineering

COURSE CONTENT

Module 1: NUMBER SYSTEMS AND BOOLEAN ALGEBRA

Digital systems, Binary Numbers, Number base conversions, Complements of numbers, Binary codes, Error detection and correction codes. Boolean Algebra-Basic definition, Basic theorems and properties, Boolean Functions, Canonical & Standard forms, logic operations & Logic gates.

Module 2: GATE LEVEL MINIMIZATION

The map method, four variable, Five variable K-map, POS & SOP Simplification, Don't care conditions, NAND & NOR Implementation, Tabular Method- Simplification of Boolean function.

Module 3: COMBINATIONAL LOGIC CIRCUIT DESIGN

Combinational circuits, Adders, Subtractors, Binary Adder-Subtractor, Decimal Adder, carry look-a-head adder, Binary Multiplier, Magnitude comparator, Decoder, Encoders, Priority Encoder, Multiplexers.

Module 4: SEQUENTIAL LOGIC CIRCUIT DESIGN

Sequential Circuits, Latches, Flip-Flops-SR, D, JK & T, Introduction to Registers-Universal Shift Registers, State table and state diagrams, State Reduction & Assignment, Sequence Detector, Design of counters-Modulo-n, Johnson, Ring, Up/Down.

Module 5: ASYNCHRONOUS SEQUENTIAL LOGIC & PROGRAMMABLE (08 Periods) MEMORIES

Introduction, Analysis procedure, Design Procedure-Primitive Flow Table, Reduction of State and Flow Tables-Implication Table and Implied States, Hazards. Programmable Memories: ROM, PLA, PAL.

Total Periods: 45

EXPERIENTIAL LEARNING

LIST OF EXERCISES: Part-A: Simulation using any EDA tool

(Minimum **Ten** Experiments are to be conducted)

- Minimization of logic circuits using K-Map. 1.
- 2. Design of half adder & subtractor and full adder & subtractor.
- 3. Design of 4 bit

a. binary adder and

- b. binary adder-subtractor
- 4. Design of 3 bit Magnitude comparator.
- 5. Design of BCD Adder
- Design of 3 to 8 decoder & 8 to 3 encoder for an engineering application. 6.
- 7. Design of 16 to 1 multiplexer using two 8 to 1 multiplexer.
- Design of BCD to seven segment decoder. 8.
- 9. Design SR, JK, T and D Flip-flops using logic gates.
- 10. Design of Universal Shift Register circuit.
- 11. Design and implementation of 3-bit synchronous up/down counter.
- 12. Design a ring counter using flip flops.
